ENCIPHOR-PLUS

Udder cleaner / Teat dip / General sanitizer

INTRODUCTION

ENCIPHOR-PLUS is a proven and powerful cleansing and sanitizing agent for use in dairy for Udder cleaning and teat dip. Cracks and injuries on the teats further the development of germs and increase the risk of penetration into the quarter, especially during milking process. The major reservoir for these pathogens is the infected udder, and infections are spread among cows or between quarters during the milking process. Teat dip should be applied at the end of milking to kill contagious bacteria that were deposited on the skin during milking. Uses of ENCIPHOR-PLUS are most effective method of preventing new infections by contagious pathogens. ENCIPHOR-PLUS alone can reduce new infections by contagious bacteria by 50%

COMPOSITION

ENCIPHOR-PLUS is essentially a nonyl phenoxy / Lauryl alkoxy polyethylenoxy ethanol-iodine complex in a suitable base providing 1.6% titratable Iodine.

APPLICATION

ENCIPHOR-PLUS has to be applied directly, twice daily on the udders and teats by spraying or dipping before / after each milking. Used for sanitising aluminum and stainless steel milking equipment, also used on plastic crates, rubber belts, tile walls and as an antimicrobial descalant

ADVANTAGES

1. Non-toxic, non-corrosive and non-irritating
2. Rapidly effective – within 5 minutes
3. Active in cold – 5° C
4. Good surface wetting
5. No build up of resistance
6. Cleans and disinfects at the same time
7. Remains active as long as liquid is amber colored
8. Acts as an effective deodorant
9. Well tolerated by teat skin and teat end.
10. Have good conditioning properties.
11. Regular use prevents mastitis

PRECAUTIONS

Keep away from direct sunlight. Do not use for cleaning brass or copper vessels .In case of a change in colour of the diluted solution, prepare a fresh solution.

PACKING SIZE

1 litre, 5 litre and 50 litre
