ENCIVET-TWP

(Water acidifier and sanitiser)

INTRODUCTION

ENCIVET-TWP is an excellent water acidifier and sanitiser with the unique distinction of being a combo product. **ENCIVET-TWP** is used to eliminate the disease causing pathogens like bacteria, virus, mycoplasma, fungi, protozoa. Besides it also removes mild scales, biofilms, mineral deposits etc, from waterers, cooling pads, waterlines and recirculating cooling systems without damaging the cell surfaces or pads thus increasing their durability. The food grade organic acids in the formulation makes it non toxic and for use as an excellent general purpose cleaner for farms and hatcheries.

ACTIVE INGREDIENTS

Concentrated Benzalkonium chloride solution synergistically blended with feed grade acids in the right proportions in an aqueous base

Feed grade acids:-24% w/v

DIRECTIONS OF USE

For water sanitation and acidifier	1-2ml in 20L of water
For disinfection and descaling	10-20ml per L of water
For disinfection and descaling of water lines	10-15ml/L of water
Water sanitation	1ml/20L of water
Humidifier tank in hatchery	1ml/5-10L of water
Disinfection and descaling of hatchery machines	10-15ml/L of water
Cleaning and disinfection of plastic equipments	30-50ml/L of water
For disinfecting birds and descaling nipples (absence of birds)	25-50ml/L of water
For cleaning cooling pads	10ml/L of water (add to sump and circulate for three hours)
As a general purpose cleaner	4-8ml/L of water as a spray
Hatchery use	8ml/L of water as spray/foam/mop

PRECAUTIONS

1. Should not be mixed or combined with chemically active substances
2. While application always wear safety gear like protective clothing and gear
3. If come in contact seek immediate first aid
